AUTOMATIC DOORS

passion for movement

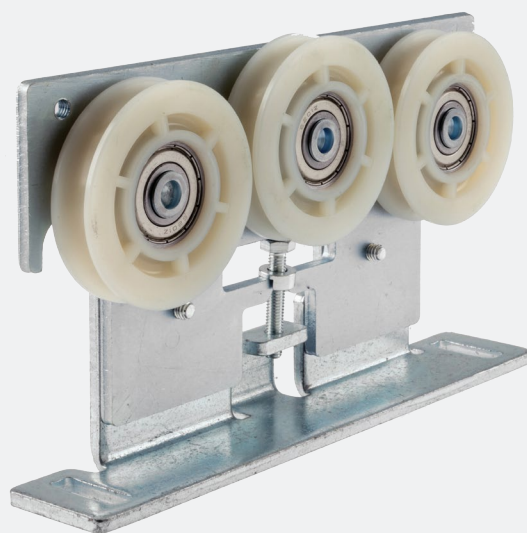

OMET Systems in Motion provides ball bearings coated with thermoplastic material and complete solutions for the sector of automatic doors installed, for example, at the entrances of companies, supermarkets, hospitals, hotels or airports.

OMET Systems in Motion fornisce cuscinetti a sfera rivestiti con materiale termoplastico e soluzioni complete per il settore delle porte automatiche installate ad esempio negli ingressi di aziende, supermercati, ospedali, hotel o aeroporti.

Safety, resistance and silence are the features guaranteed in time for producers in this sector. Often, doors are big and must fulfill several requirements concerning aesthetics, architecture, quality and operational in accordance with the regulations and safety.

OMET defines or develops the most suitable plastic materials to fulfill the customer's requirements according to the load that will have to be supported, the environment which the door will be placed in, and other variables.

Sicurezza, resistenza e silenziosità sono le caratteristiche garantite nel tempo per i produttori di questo settore. Le porte spesso hanno grandi dimensioni e devono rispondere ad innumerevoli requisiti estetici, architettonici, qualitativi e di utilizzo gravoso nel rispetto delle normative e della sicurezza. In base al carico che dovrà supportare, all'ambiente in cui sarà inserita la porta e ad altre variabili, OMET definisce o sviluppa i materiali plastici più adatti alle esigenze del cliente.

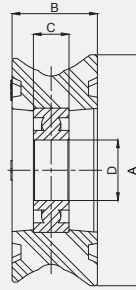

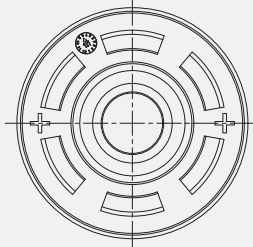

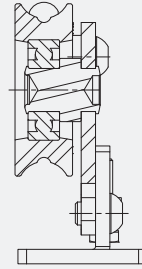

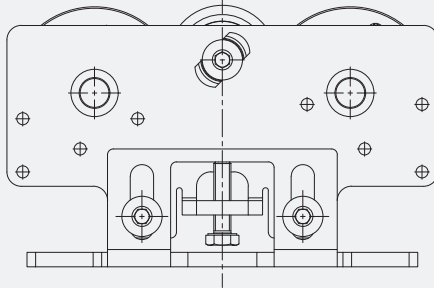

OMET can provide the customer with "turnkey" carriages to be fitted directly on the door operator, and wheels to be produced with coatings that are increasingly wear-resistant and suitable for reducing noise.

OMET può fornire al cliente carrelli "chiavi in mano" da montare direttamente sull'operatore e ruote con rivestimenti sempre più resistenti all'usura e idonei a ridurre il rumore durante l'utilizzo.
