

## WHEELS

passion for movement

OMET Systems in Motion produces bearings that are over-moulded and inserted in the wheels used in various sectors, such as trolleys for supermarkets or for airports or luggage trolleys for hotels but also in commonly used products such as lawn mowers, wheelbarrows or toys.

*OMET Systems in Motion produce i cuscinetti che vengono sovrastampati e inseriti nelle ruote utilizzate in diversi settori, come carrelli per supermercati, carrelli per aeroporti o portabagagli per hotel, ma anche in prodotti di utilizzo comune come rasaerba, carriole o giocattoli.*

The products are manufactured with specific features for various areas of use. Depending on the type of materials used, the increase in hardness of the bearing is obtained through carbonitriding for automatic steel or hardening + quenching for chromium steels.

OMET can offer a bearing-manufact integrated system (plastic or metal forks) such as accessories or first system for carriages or handling systems.

*I prodotti vengono realizzati con caratteristiche specifiche per differenti ambiti di utilizzo. In base alla tipologia di materiali utilizzati, l'aumento della durezza del cuscinetto viene ottenuto tramite carbonitrurazione per acciai automatici o tempra + rinvenimento per acciai al cromo.*

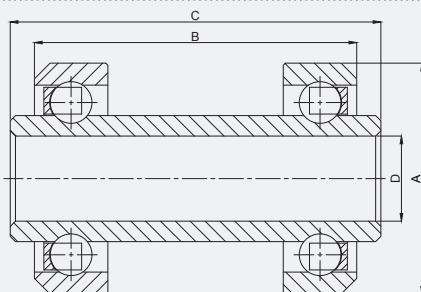

*OMET è in grado di offrire un sistema integrato cuscinetto-manufatto (forcelle in plastica o metalliche) come accessori o primo impianto per carrelli o sistemi di movimentazione.*
